# Pandas Programming Python

# EV3 Robot

# AHHH!!!! Something isn't Working

- STARTUP ERROR, CHECK PORT x

- This means a cable is unplugged check that everything is plugged in

  - PORT A - Left Attachment

  - PORT B - Left Drive

  - PORT C - Right Drive

  - PORT D - Right Attachment

  - PORT 4 - Gyro

- If that doesn't work, unplug the PORT x cable from the sensor and the bot, then plug back in

# AHHH!!!! Something isn't Working

- I press my mission button and nothing happens, it goes back to the file directory

- This means you have a typo in your code

- Plug the USB cable in

- Run Debug and watch the print statements for errors

# AHHH!!!! Something isn't Working

- In Debug Visual Studio shows an TBD error

- This means you have an indentation problem in your code

- Inspect the line number from the error code and fix indentation
